BMR Group provides expert services in equipment repair, modification, and salvage for the can and lid manufacturing industry. **We specialize in thermal-sprayed coatings, laser heat treating and cladding, and welded overlays** to help you combat the effects of erosion, wear, and corrosion in your operations.

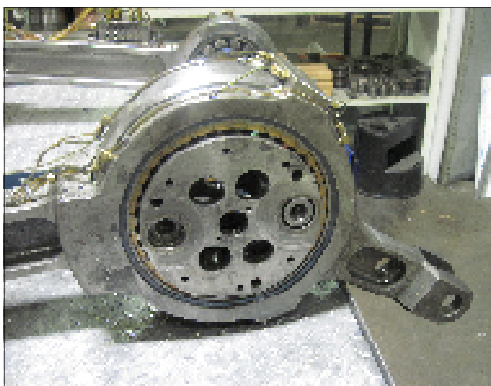

When your line goes down for a broken or worn component, it's no time to thumb through a stack of business cards looking for help. It's time to call a specialist with 40 years of experience who can provide the service you need right now. **That's BMR Group!**

Because of our expertise with coatings and overlays, our *customers save thousands of dollars every year*. By spraying tough coating materials on components you use every day for manufacturing cans and lids, BMR Group can prolong your equipment life and help you *avoid hundreds of hours of down-time*. Hard-coated surfaces help combat the effects of corrosion, heat, and wear agents and **keep your lines moving**.

BMR Group offers a wide variety of materials for coating surfaces—from **tungsten carbide** to **ceramics** to **babbitt**. We use different coating processes, according to the material you need for the intended application of your part.

BMR Group also specializes in modification, rebuild, and salvage of many different types of components used in virtually every can and lid manufacturing application.

- Printer mandrels
- Bearing races
- Bodymaker rams
- Fountain rolls
- Journals
- Bushings
- Many other parts

BMR GROUP - Industrial services for the container manufacturing industry

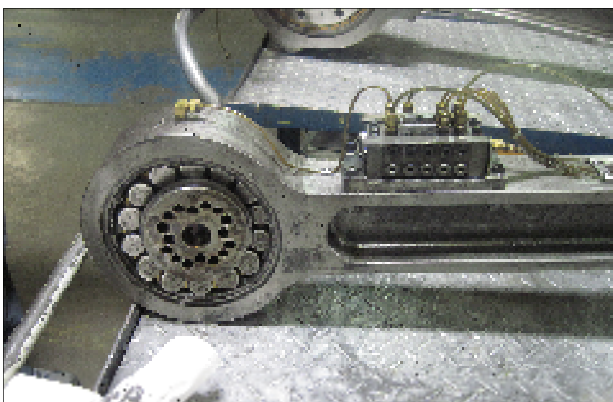

During the past 40 years, BMR Group has developed extensive skills in **repairing, modifying, and salvaging** all types of industrial machinery and equipment damaged by catastrophe or every-day operation. And BMR Group offers that entire set of skills to our customers in multiple industries.

Drawing on a wide range of patented coating and overlay technologies, BMR Group can repair virtually any mechanical component. We rebuild worn surfaces and finish them to their original dimensions. Our repair services help you avoid spending important time and money on new equipment.

We understand that you make money only when you're operating on your planned schedule. So we offer a wide range of repair and maintenance services as well as fabrication capabilities to help you **keep your operation running**.

We employ many different metal spraying and welding techniques to ensure the highest quality coatings and overlays for our customers. We select the proper coating material and process based on your requirements and the application of your part. Our primary processes are:

- HVOF Spray
- Plasma Spray
- Arc Wire Spray
- Welding Overlays
- Laser Cladding
- Laser Heat Treating
